Late Merovingian France Paul Fouracre 2013-01-01 This collection of documents in translation brings together the seminal sources for the late Merovingian Frankish kingdom. It interprets the chronicles and saint's lives rigorously to reveal new insights into the nature and significance of sanctity, power and power relationships. The book makes available a range of 7th- and early 8th-century texts, five of which have never before been translated into English. It opens with a broad-ranging explanation of the historical background to the translated texts and then each source is accompanied by a full commentary and an introductory essay exploring its authorship, language and subject matter. The sources are rich in the detail of Merovingian political life. Their subjects are the powerful in society and they reveal the successful interplay between power and sanctity, a process which came to underpin much of European culture throughout the early Middle Ages.

Fields of Glory Jean Rouaud 2012-01-20 Winner of the Prix Goncourt A New York Times Notable Book of the Year The setting may be the rainy lower Loire Valley of the 1950s, but it is the WW I battlefields of Artois, Meuse, Lorraine, and Yser that form the emotional backdrop to this poignant testament to the vitality of life that death cannot dim. *Fields of Glory* begins as a collection of utterly charming reminiscences of the eccentricities of family elders told by an unnamed and indeterminately aged narrator. In pure and graceful prose, Rouaud describes crotchety grandfather Burgaud with his equally difficult car, a cramped and leaky CV2, and maiden great-aunt Marie with her card file of saints—"A prefatory catalogue of terrifying symptoms refers the reader to the saint specializing in the corresponding disorder. The work of a lifetime." It is in the midst of this comedy of daily life that the melancholy subtext of

three generations slowly emerges: the stories of the two young men who were casualties of the Fields of Glory and the family that remains to remember them.

Commentary Marcelle Sauvageot 2013 Fiction. Translated from the French by Christine Schwartz Hartley and Anna Moschovakis. COMMENTARY is a narrative hovering between the genres of memoir, theory, and fiction about a female artist whose abandonment by a lover precipitates a refiguration of her ideas on life, love and art. Sauvageot died, after many stints in sanatoriums, at the age of 34. Commentaire was highly praised in its time by Paul Claudel, Paul Valery, Andre Gide, Charles Du Bos, Rene Crevel ou Clara Malraux. This edition is co-translated by Christine Schwartz Hartley (African Psycho) and Anna Moschovakis (The Jokers, The Possession). When, in the morning, daybreak awakens us from a dream, we close our eyes and remain still, trying to recreate and continue the scene. But the day's light has destroyed everything: words are without sound, gestures without meaning. It is like a vanishing rainbow: some hues survive for an instant, disappear, seem to return: there is nothing left."

Data Structures and Algorithms in Computer Science Joe Oswald 2018-02-14 Data structure refers to the assimilation of data in a way so that it can be used efficiently. The important types of data structures are the record, the array, the table, the file, the tree, the class, the union, etc. Data structures are designed by using different intricate algorithms in any computer program. Algorithms are a sequence of actions used for data processing along with calculation and reasoning tasks. This book is compiled in such a manner, that it will provide in-depth knowledge about the theory and practice of data structures and algorithms with respect to computer science. It unfolds the innovative aspects of this subject, which will be crucial for the holistic understanding of this area. This textbook is an essential guide for both academicians and those who wish to pursue

this discipline further.

In this book, however, the author reveals the surprising complexity of the game, along with advanced strategies that will allow the reader to win at any level of gamepla

The One by Whom Scandal Comes René Girard 2014-01-01 "Why is there so much violence in our midst?" René Girard asks. "No question is more debated today. And none produces more disappointing answers." In Girard's mimetic theory it is the imitation of someone else's desire that gives rise to conflict whenever the desired object cannot be shared. This mimetic rivalry, Girard argues, is responsible for the frequency and escalating intensity of human conflict. For Girard, human conflict comes not from the loss of reciprocity between humans but from the transition, imperceptible at first but then ever more rapid, from good to bad reciprocity. In this landmark text, Girard continues his study of violence in light of geopolitical competition, focusing on the roots and outcomes of

violence across societies latent in the process of globalization. The volume concludes in a wide-ranging interview with the Sicilian cultural theorist Maria Stella Barberi, where Girard's twenty-first century emphases on the continuity of all religions, global conflict, and the necessity of apocalyptic thinking emerge.

Arthropods as Vectors of Emerging Diseases Heinz Mehlhorn 2012-07-05

Global warming and globalization are the buzzwords of our time. They have nearly reached a religious status and those who deny their existence are considered modern heretics. Nevertheless, the earth has become an overcrowded village, traversable within a single day. Thus it is hardly surprising that besides persons and goods also agents of disease are easily transported daily from one end of the world to the other, threatening the health and lives of billions of humans and their animals. Agents of diseases (prions, viruses, bacteria, fungi and parasites) are not only transmitted by body contact or direct exchange of bodily fluids, but also by means of vectors which belong to the groups of licking or blood-sucking arthropods (mites, ticks, insects) that live close to humans and their houses. Without a doubt the recently accelerating globalization supports the import of agents of disease into countries where they never had been or where they had long since been eradicated, leading to a false sense of living on a "safe island." These newly imported or reintroduced diseases - called "emerging diseases" - may lead to severe outbreaks in cases where the countries are not prepared to combat them, or in cases where viruses are introduced that cannot be controlled by medications or vaccines. Arthropods are well known vectors for the spread of diseases. Thus their invasion from foreign countries and their spreading close to human dwellings must be blocked everywhere (in donor and receptor countries) using safe and effective measures. This book presents reviews on examples of such arthropod-borne emerging diseases that lurk on the fringes of our crowded megacities. The following topics show that there is an ongoing invasion of potential vectors and that control measures must be used now in order to avoid disastrous outbreaks of mass diseases.

Non-Homogeneous Boundary Value Problems and Applications Jacques Louis Lions 2012-12-06 1. We describe, at first in a very formal manner, our essential aim. Let m be an open subset of \mathbb{R}^n , with boundary ∂m . In m and on ∂m we introduce, respectively, linear differential operators P and Q_j , $0 \leq j \leq n-1$. By "non-homogeneous boundary value problem" we mean a problem of the following type: let f and g_j , $0 \leq j \leq n-1$, be given in function space S and G_j , G_j being a space on ∂m and the G_j spaces on ∂m ; we seek u in a function space U on m satisfying (1) $Pu = f$ in m , (2) $Q_j u = g_j$ on ∂m , $0 \leq j \leq n-1$. Q_j may be identically zero on part of ∂m , so that the number of boundary conditions may depend on the part of ∂m considered. 2. We take as "working hypothesis" that, for $f \in F$ and $g_j \in G_j$, the problem (1), (2) admits a unique solution $u \in U$, which depends continuously on the data. But for all linear problems, there is a large number of choices for the space U and $\{F; G_j\}$ (naturally linked together). Generally speaking, our aim is to determine families of spaces U and $\{F; G_j\}$, associated in a "natural" way with problem (1), (2) and convenient for applications, and also all possible choices for U and $\{F; G_j\}$ in these families.

The Merovingian Kingdoms, 450-751 Ian N. Wood 1994 The centuries immediately following the collapse of Roman rule in what is now France are an extraordinarily tangled time that is frequently dismissed as no more than a chaotic prelude to Charlemagne and the Carolingian Dynasty. Ian Wood's aim is to demonstrate that there was more to Merovingian France than fratricidal kinglets, murderous queens, corrupt bishops and otherworldly monastic saints.

True and False Reform in the Church Yves Congar 2010-12-01
Archbishop Angelo Roncali (later Pope John XXIII) read True and False Reform during his years as papal nuncio in France and asked, A reform of the church 'is such a thing really possible?' A decade later as pope, he opened the Second Vatican Council by describing its goals in terms that reflected Congar's description of authentic reform: reform that penetrates to the heart of doctrine as a message of salvation for the whole of humanity, that retrieves the meaning of prophecy in a living church, and that is deeply rooted in history rather than superficially related to the apostolic tradition. Pope John called the council not to reform heresy or to denounce errors but to update the church's capacity to explain itself to the world and to revitalize ecclesial life in all its unique local manifestations. Congar's masterpiece fills in the blanks of what we have been missing in our reception of the council and its call to "true reform." Yves Congar, OP, a French Dominican who died in 1995, was the most important ecclesiologist in modern times. His writings and his active participation in Vatican II had an immense influence upon the council documents. With a few other contemporaries, Congar pioneered a new style of theological research and writing that linked the great tradition of Scripture and the Fathers to contemporary pastoral questions with lucidity and passion. His key concerns were the unity of the church, lay apostolic life, and a revival of the church's theology of the Holy Spirit. He was named a cardinal by Pope John Paul II in recognition of his profound contributions to the Second Vatican Council. Pal Philibert, OP, has taught pastoral theology in the United States and abroad. He is a Dominican friar of the Southern Province. His translation of a collection of Congar's essays on the liturgy has recently been published by Liturgical Press under the title *At the Heart of Christian*

Worship. His book *The Priesthood of the Faithful: Key to a living Church* (Liturgical Press, 2005) reflects the ecclesiology of Yves Congar and his Vision of the apostolic life of the faithful. "

Thoughts on Unconventional Computing Andrew Adamatzky 2021-02-28 There is no strict definition of unconventional computing. Being an unconventional computist is not a matter of training but thinking and living. Phenomenologically most works on unconventional computing are about implementation of computing in novel substrates (chemical, physical, biological), development of computing schemes and algorithms not fitting into the mainstream framework, or designing of computing architectures inspired by chemical or biological systems. This short book gives a snapshot of the unconventional computing field. The world-leading experts in the unconventional computing author all articles of the issue. The topics include analog computation, sensing and computing with fungi, chemical computing, swarms of minimalist agents, computational universality, mega-computing in the universe, information and music, universal sensing, art of deduction, reversible computing, philosophy of machine learning, epistemic incompleteness, post-quantum unconventional computing, complexity of natural computing, arts and cellular automata. Articles presented are punchy and well illustrated. All articles are short and self-contained. The book will serve well as a light-touch introduction to unconventional computing for people not familiar with computing and might inspire artists and humanitarians to enter the field.
