Sainte Lydwine de Schiedam Joris-Karl Huysmans 1911

Across the Street Georges Simenon 1992 In an apartment in Faubourg Saint-Honore that has seen better days, Dominique, the daughter of a general, is busy mending her dress. It is hot. She sits in her slip as she sews and listens to the noises of the city, listens to the scratchy tango the couple in the other room, her boarders, play on the gramophone while they make love. Sometimes Dominique cannot resist looking through the keyhole, though it hurts her and makes her giddy. In three months she will be forty. All the shutters across the street are wide open. Dominique watches the Rouets. She follows their gestures, the movements of their lips. It is a long story without words, and she knows the smallest episodes of it. Then one day she sees Monsieur Rouet in his bed gasp his last while in the next room Antoinette, his wife, stands holding the medicine, her hand on the doorknob. With his usual mastery Georges Simenon describes the day-to-day suffering of a woman who lives alone and only through the lives of others.

Copse 125 Ernst Jünger 2021-02-19 Originally published in 1924, *Copse 125* (Das Wäldchen 125) is Ernst Jünger's third book, where he further recounts his experiences in one particularly treacherous stretch of the Western Front. In *Copse 125*, Jünger chronicles the deadlocked positions of battle located in an "isolated little patch of wood" during the last year of the war. Along with his later recollections of the event, Jünger also shares his ruminations concerning the material and spiritual implications of the front line warrior. This is a new English translation of *Das Wäldchen 125*, published by E.S. Mittler & Son, Berlin, Germany, 1925.

Non-Homogeneous Boundary Value Problems and Applications Jacques Louis Lions 2012-12-06 1. We describe, at first in a very formal manner, our essential aim. Let m be an open subset of R^n , with boundary ∂m . In m and on ∂m we introduce, respectively, linear differential operators P and Q_j , $0 \leq j \leq n-1$. By "non-homogeneous boundary value problem" we mean a problem of the following type: let f and g_j , $0 \leq j \leq n-1$, be given in function space S and G_j , S being a space "on m " and the G_j spaces "on ∂m "; we seek u in a function space U "on m " satisfying (1) $Pu = f$ in m , (2) $Q_j u = g_j$ on ∂m , $0 \leq j \leq n-1$. Q_j may be identically zero on part of ∂m , so that the number of boundary conditions may depend on the part of ∂m considered. 2. We take as "working hypothesis" that, for $f \in S$ and $g_j \in G_j$, j the problem (1), (2) admits a unique solution $u \in U$, which depends continuously on the data. But for all linear problems, there is a large number of choices for the space S and $\{G_j\}$ (naturally linked together). Generally speaking, our aim is to determine families of spaces S and $\{G_j\}$, associated in a "natural" way with problem (1), (2) and convenient for applications, and also all possible choices for U and $\{G_j\}$ in these families.

Duo Colette 1999 In *Duo*, Colette observes, with masterly astuteness and perception, two characters whose marriage is foundering on the wife's infidelity. Acting out the final crisis, Alice and Michel have the stage to themselves so that nothing is allowed to distract from the marital dialogue. Le Toutoumier continues Alice's story after Michel's death and her move to Paris. There she and her two sisters live in a shabby, homely apartment; fiercely independent, reticent, and hard.
