Groundwater and Global Change in the Western Mediterranean Area Maria Luisa Calvache 2017-10-26 This book is a compilation of papers examining the impacts of global change (GC) on water resources systems. Mainly focusing on groundwater resources in Western

Mediterranean countries, it shows that this topic is one of the most important challenges facing society. The papers explore developments in both Southern Europe and North Africa, where major impacts on the sustainability, quantity, quality, and management of water resources are expected to emerge. Although most global change publications focus on surface water, the number of research papers addressing global change and groundwater has grown rapidly in recent years. Continuing that welcome trend, this book gathers the main findings presented at the "Congress on Groundwater and Global Change in the Western Mediterranean" (Granada, Spain, November 6-9, 2017), which brought together researchers and technicians interested in groundwater issues affecting this geographic area.

Impressions of Africa Raymond Roussel 2018-12-18 The first of Roussel's two major prose works, Impressions of Africa is not, as the title may suggest, a conventional travel account, but an adventure story put together in a highly individual fashion and with an unusual time sequence, whereby the reader is even made to choose whether to begin with the first or the tenth chapter. A veritable literary melting pot, Roussel's groundbreaking text makes ample use of wordplay and the surrealist techniques of automatic writing and private allusion.

Encyclopedia of French Film Directors Philippe Rège 2009-12-11 Cinema has been long associated with France, dating back to 1895, when Louis and Auguste Lumi_re screened their works, the first public viewing of films anywhere. Early silent pioneers Georges Méliès, Alice Guy Blaché and others followed in the footsteps of the Lumi_re brothers and the tradition of important filmmaking continued throughout the 20th century and beyond. In *Encyclopedia of French Film Directors*, Philippe Rège identifies every French director who has made at least one feature film since 1895. From undisputed masters to obscure one-timers, nearly 3,000 directors are cited here, including at least 200 filmmakers not mentioned in similar books published in France. Each director's entry contains a brief biographical summary, including dates and places of birth and death; information on the individual's education and professional training; and other pertinent details, such as real names (when the filmmaker uses a pseudonym). The entries also provide complete filmographies, including credits for feature films, shorts, documentaries, and television work. Some of the most important names in the history of film can be found in this encyclopedia, from masters of the Golden Age Jean Renoir and René Clair to French New Wave artists such as François Truffaut and Jean-Luc Godard.

Botulinum and Tetanus Neurotoxins B.R. DasGupta 2013-11-11 Three days in Madison have thoroughly modified my view on clostridial neurotoxins. While still realizing the numerous activating, modifying and protective inputs, I cannot judge the meaningfulness of the meeting impartially. Neither may the reader expect a complete summary of all presentations. Collected in this volume, they speak for themselves without requiring an arbiter. Instead I shall write down my very personal opinions as a researcher who has studied clostridial neurotoxins for nearly 25 years. Comparable conferences have been rare during this time. A comprehensive symposium 4 on C. botulinum neurotoxins has been organized at Ft. Detrick. International conferences on tetanus have been held regularly under the auspices of the World

Health Organization. One or maximally two days of these meetings have been devoted to tetanus toxin and its actions whereas the sponsor and the majority of the participants have been interested mainly in epidemiology, prevention and treatment of tetanus as a disease (see refs. 5,6). Some aspects of clostridial neurotoxins have been addressed in the context of bacterial toxins, in particular in the biennial European workshops. 1-3,7,8 The Madison meeting differed from the previous ones in three aspects. First, it covered both tetanus and botulinum neurotoxins. The fusion was justified because of their huge similarities in primary structure, in their mode of action and in their cellular targets. Second, the meeting was not limited to toxins but drew some lines on which modern neurobiology might proceed.

Legend of the Scarlet Blades Saverio Tenuta 2016-10-04 Raido, a young amnesic Ronin—a masterless Samurai—roams about in a quest for his memories. His first stop is the city that talks to the sky, the ultimate stronghold against the ice invading the land of the rising sun. There, he meets Meiki, a graceful puppeteer and storyteller of charms. "Legend of the Scarlet Blades," as painted by the tormented and airy style of Saverio Tenuta, is a series whose universe is inspired by feudal Japanese history and traditions, full of breathtaking settings and populated by a myriad of wondrous mythical beings.

The Age of the Vikings Anders Winroth 2016-03-01 A major reassessment of the vikings and their legacy The Vikings maintain their grip on our imagination, but their image is too often distorted by myth. It is true that they pillaged, looted, and enslaved. But they also settled peacefully and traveled far from their homelands in swift and sturdy ships to explore. The Age of the Vikings tells the full story of this exciting

period in history. Drawing on a wealth of written, visual, and archaeological evidence, Anders Winroth captures the innovation and pure daring of the Vikings without glossing over their destructive heritage. He not only explains the Viking attacks, but also looks at Viking endeavors in commerce, politics, discovery, and colonization, and reveals how Viking arts, literature, and religious thought evolved in ways unequalled in the rest of Europe. The Age of the Vikings sheds new light on the complex society, culture, and legacy of these legendary seafarers.

Manual Therapy for the Prostate Jean-Pierre Barral, D.O. 2010-06-29 Manual Therapy for the Prostate presents a comprehensive guide to the prostate that includes manual treatment procedures designed to resolve common prostate issues. Based on author Jean-Pierre Barral's clinical practice and his innovative theory of visceral manipulation, the book provides a structured framework rooted in anatomy and physiology. By precisely applying manual techniques to the prostate and surrounding structures, practitioners can successfully treat prostate problems and help patients avoid surgical procedures or medication. Featuring detailed, full-color anatomy illustrations throughout, the book begins with a discussion of the anatomical structure and function of the prostate. Causes of prostate dysfunction are revealed, including predisposing factors such as age, ethnicity, stress level, diet, and tobacco and alcohol usage. The book explores the signs, symptoms, prevention, and allopathic treatments for disease and dysfunction of the prostate. Examination and manual treatment protocols, contraindications and precautions, and the various goals the practitioner is working to achieve are clearly described. Explaining how all pelvic structures have links with the rest of the body, the book concludes by demonstrating how the entire body is interconnected and elucidating the influence of stress and emotional issues in prostate dysfunction.

Natural History of West Indian Reptiles and Amphibians Robert W. Henderson 2009 The reference source that biologists interested in West Indian herpetofauna have been waiting for.--Steven Reichling, curator, Memphis Zoo A state-of-the-art compendium. The West Indies is one of the hottest of the world's biodiversity hot spots and will continue to be a focus of ecological research, now invigorated by this definitive synthesis.--S. Blair Hedges, Pennsylvania State University The West Indies have become a major focus for biologists and conservationists. Its herpetofauna is considered one of the richest and most vulnerable in the world. These fragile natural environments are home to many unique animals that occur only on these islands. Loss of habitat, development of scenic areas for a burgeoning tourist industry, and the introduction of invasive species have contributed to an already tenuous situation for many of the region's native species. This volume summarizes the natural history of each of the

more than seven hundred species of frogs and reptiles that live in the West Indies. Sure to be the starting point for all future research on West Indian amphibians and reptiles, it will be an essential companion to the biologist contemplating or conducting research in the area.

The Solution Lies Within Thierry Janssen 2010 A characteristic of Western medicine and surgery on the one hand and psychiatry and psychotherapy on the other has been, until very recently, the prevalence of the Cartesian dichotomy of mind and body. It has, of course, been known for centuries that each influences the other, but that knowledge has been largely ignored in practice. --

What Became of the White Savage François Garde 2015-05-05 Some time in the 1840s, Narcisse, a young French sailor is abandoned on the coast of Australia and given up for dead by his shipmates. Seventeen years later he is found living among aboriginal peoples, having apparently forgotten everything of his original identity, including his native French language. Octave de Vallombrun, a well-meaning geographer, takes him under his wing and sets out to bring Narcisse, now known as the "white savage" back to civilisation and to find out what happened during those seventeen years. Observing Narcisse's struggle to adjust to the ways of the white man, Octave too begins to question his assumptions about what it means to be civilised, and to see in a new light the man known as the "white savage".

Cranial Intelligence Ged Sumner 2011-01-15 At the deepest level of our physiology, all living tissues and fluids expand and contract with the 'breath of life'. Through gentle touch, the skilled practitioner can interact with these subtle rhythms to address physical aches and pains, acute or chronic disease, emotional or psychological disturbances, or simply to promote enduring health and vitality. This new and important textbook demystifies the biodynamic approach to craniosacral therapy and shows how and why it can be so effective at bringing about a natural realignment towards optimal health. The authors describe how to 'listen' and respond appropriately to each client's system, how to create a safe space for working with different kinds of trauma, and how to address specific states of imbalance to support deep-felt and lasting change. Throughout the book, experiential exercises encourage the reader to practice their newly-acquired skills, and refine their knowledge of human anatomy and physiology. A final chapter on practice development covers issues pertinent to practitioners trying to set up and maintain a successful practice. This intensely practical textbook will transform the practice of craniosacral therapists, and contains much that bodyworkers of all kinds will find useful.
