Responsible Design in Applied Linguistics: Theory and Practice Albert Weideman 2016-09-05 No mere history of applied linguistics, this volume presents a framework for interpreting the development of applied linguistics as a discipline. It offers a systematic account of how applied linguistics has developed, articulating the philosophical premises that have informed both its emergence and its subsequent growth. It asks questions that are seldom asked: Where does the discipline derive from? Where is it heading? What directions has it already taken? Which direction should it embrace in future? What is the relative worth of all of the variation in design and methods that have been developed by applied linguists? In defining applied linguistics as a discipline of design, it takes us beyond the diffuse and sometimes contradictory conventional definitions of the field. The framework of design principles it proposes not only helps to explain the historical development of applied linguistics, but also provides a potential justification for solutions to language problems. It presents us with nothing less than an emerging theory of applied linguistics.

Language and Sustainable Development Lisa J. McEntee-Atalianis 2023-03-03 This book addresses the importance of language in matters of sustainability and incorporating such concerns in implementing the UN's Sustainable Development Goals (SDGs). The book brings together nine studies covering such topics as language and digital resources, sustainable and inclusive multilingual education, national language policy, and language in peacekeeping operations. A final chapter addresses the crucial intersection between sociolinguistics and economics, and the implications of this for development and the SDGs.

Multilingual Education Yearbook 2021 Anthony A. Essien 2021-05-04

This edited book attempts to foreground how challenges and complexities between policy and practice intertwine in the teaching and learning of the STEM subjects in multilingual settings, and how they (policy and practice) impact on educational processes, developments and outcomes. The unique feature of this book, thus, lies in its combination of not just language issues in the teaching and learning of the STEM subjects, but also in how these issues relate to policy and practice in multilingual contexts and how STEM research and practice may inform and shape language policies and their implementation in multilingual contexts. This book is of interest to stakeholders involved in STEM education such as researchers, undergraduate and graduate students,

tertiary level teachers, teacher educators, curriculum developers as well as other professionals with responsibilities in STEM education subjects. The book is written in a way that is accessible to a wide range of backgrounds, including those who are in language education.

Teaching Chemistry in Higher Education Michael Seery 2019-07-01 Teaching Chemistry in Higher Education celebrates the contributions of Professor Tina Overton to the scholarship and practice of teaching and learning in chemistry education. Leading educators in United Kingdom, Ireland, and Australia—three countries where Tina has had enormous impact and influence—have contributed chapters on innovative approaches that are well-established in their own practice. Each chapter introduces the key education literature underpinning the approach being

described. Rationales are discussed in the context of attributes and learning outcomes desirable in modern chemistry curricula. True to Tina's personal philosophy, chapters offer pragmatic and useful guidance on the implementation of innovative teaching approaches, drawing from the authors' experience of their own practice and evaluations of their implementation. Each chapter also offers key guidance points for implementation in readers' own settings so as to maximise their adaptability. Chapters are supplemented with further reading and supplementary materials on the book's website (overtontestschrift.wordpress.com). Chapter topics include innovative approaches in facilitating group work, problem solving, context- and problem-based learning, embedding transferable skills, and laboratory education—all themes relating to the scholarly interests of Professor Tina Overton. About the Editors: Michael Seery is Professor of Chemistry Education at the University of Edinburgh, and is Editor of Chemistry Education Research and Practice. Claire Mc Donnell is Assistant Head of School of Chemical and Pharmaceutical Sciences at Technological University Dublin. Cover Art: Christopher Armstrong, University of Hull

Industrial Design Rights Brian W. Gray 2020-10-14 This book is a revised and updated edition of a major work first published in 2001 under the auspices of the Intellectual Property Committee of the International Bar Association. As a comparative cross-jurisdictional analysis of the practice, theory, scope, and types of design protection, it will continue to be of immeasurable value to lawyers and others involved in industrial design. Industrial designs are particularly interesting because the laws in many countries attempt in different ways to find a balance between protection for the artistic creation and the freedom to use the purely functional, and between the proprietary rights of the creator and the public domain rights of the competitor. The third edition is comprised of twenty-five country reports, each written by one or more prominent intellectual property lawyer(s) in the country covered. To facilitate cross-jurisdictional comparison, each report is structured according to the following sequence of topics: new developments in each jurisdiction; conventions and legislation; definition of what constitutes a protectable

design; originality /novelty; duration of protection; infringement; defences to infringement; procedures for filing application for registration; and expunging, cancelling, or varying registration. Prominent new developments covered in the third edition include new chapters from South Korea, Russia and Turkey as well as continuing coverage of the impact of the European Community Design Directive, the adoption of the Hague Agreement with corresponding major changes to US and Canadian design law and practice, the newly revised Japanese Design Law, and China's revised Guidelines for Examination. Each jurisdiction's currently applicable legislation, regulation, and case law is summarized and analysed.

Refining Processes for the Co-Development of Genome-Based Therapeutics and Companion Diagnostic Tests Institute of Medicine 2014-03-06 Many drug developers have examined new strategies for creating efficiencies in their development processes, including the adoption of genomics-based approaches. Genomic data can identify new drug targets for both common and rare diseases, can predict which patients are likely to respond to a specific treatment, and has the potential to significantly reduce the cost of clinical trials by reducing the number of patients that must be enrolled in order to demonstrate safety and efficacy. A key component of the approval of targeted therapeutics is the ability to identify the population of patients who will benefit from treatment, and this has largely hinged on the co-development and co-submission to the FDA of a companion diagnostic test. The co-development process, or the development of the test and drug for the simultaneous submission to FDA, has led to a major alteration in the way that drugs are being developed, with traditionally separate entities—pharmaceutical and diagnostic companies—now working in close collaboration. Refining Processes for the Co-Development of Genome-Based Therapeutics and Companion Diagnostic Tests is the summary of a workshop held by the Roundtable on Translating Genomic-Based Research for Health on February 27, 2013 to examine and discuss challenges and potential solutions for the codevelopment of targeted therapeutics and companion molecular tests for the prediction of drug

response. Prior to the workshop, key stakeholders, including laboratory and medical professional societies, were individually asked to provide possible solutions to resolve the concerns raised about co-development of companion diagnostic tests and therapies. Workshop speakers were charged with addressing these solutions in their presentations by providing insight on (1) whether the proposed solutions address the problems described, (2) whether there are other solutions to propose, and (3) what steps could be taken to effectively implement the proposed solutions.

New Solutions for an Old Challenge Ronny Merkel 2014-01-17 In criminal investigations, latent fingerprints are often considered as reliable means of identifying suspects. However, the evidential value of a print is strongly dependent on the knowledge of its age (the time which has passed since deposition). Suspects might admit their previous presence at a crime scene, but often claim to have been there prior to or after the crime. Especially in regard to public or highly-frequented crime scenes, prints might lose their evidential value in this case, potentially leading to dropped charges. Despite its high relevance, the challenge of estimating a latent print's age could not be adequately addressed for 80 years. In this thesis, non-invasive high-resolution capturing devices are for the first time applied to the age estimation challenge, replacing classical physical or chemical print development techniques. They allow to capture a single print in regular time intervals and to systematically study its degradation behavior. Introducing automated processing methods in the form of a digital pipeline including preprocessing, feature extraction and age estimation techniques, objective age estimates are presented for the first time in this field. Maximum classification performances of different capturing devices between 76% and 86% are achieved for two-class problems. Furthermore, a qualitative influence model on the aging speed of latent prints is designed, forming a prerequisite for future studies.

Navigating the Cultures of Health Care and Health Insurance Nina Zeldes 2023-04-20 What are the barriers preventing migrants from accessing and successfully utilizing health care in their new home country? Do these barriers vary across different migrant origin countries? And are they still a problem for highly skilled migrants, who often have well-paid jobs and health insurance provided by their employers? Based on field research conducted in the Washington D.C. area, *Navigating the Cultures of Health Care and Health Insurance* takes a mixed methods, qualitative and quantitative approach to the study of foreign patients' utilization and assessment of health care in the US. Through interviews with both health care providers and patients, attitudes towards US health insurance and medical treatment are compared for migrants from three countries with very different cultural backgrounds and health insurance systems: Germany, India and Japan. Combined with an in-depth literature review, historical and contemporary surveys of health care across countries and analysis of health-related terms in the media, the results of this research indicate that foreign patients' barriers to good health care persist despite access to health care services and insurance coverage, and reveal recurring transnational care seeking patterns, such as bringing medicines from abroad, delaying treatment for medical visits, insurance juggling and more. By describing their difficulties in integrating into the US health care system, the migrants in this study show the challenges and the potential for improvements in providing the care that migrants need in their new home.

Chinese for Specific and Professional Purposes Hongyin Tao 2019-08-20 This book, likely the first of its kind in the English language, explores Chinese for specific and professional purposes (CSP) in terms of theorizing and developing practical applications for language teaching and learning. While research in language for specific purposes is thriving

for languages such as English, there has been comparatively little such research conducted for Chinese. This volume attempts to fill the gap by bringing together practitioners from a broad international scholarly community, who share common interests yet diverse orientations. Seventeen papers are included, and address four broad thematic categories: (1) academic Chinese, (2) business Chinese, (3) Chinese for medicine and health care, and (4) Chinese for other broadly defined services and industries (diplomacy, tourism, wine-tasting, etc.). Representing the state of the art in CSP research, the book offers an indispensable guide for anyone interested in theoretical and practical issues in this area of applied Chinese language studies.
