Making Migration Law Eve Lester 2018-03-22

The emergence of international human rights law and the end of the White Australia immigration policy were events of great historical moment. Yet, they were not harbingers of a new dawn in migration law. This book argues that this is because migration law in Australia is best understood as part of a longer jurisprudential tradition in which certain political-economic interests have shaped the relationship between the foreigner and the sovereign. Eve Lester explores how this relationship has been wrought by a political-economic desire to regulate race and labour; a desire that has produced the claim that there exists an absolute sovereign right to exclude or condition the entry and stay of foreigners. Lester calls this putative right a discourse of 'absolute sovereignty'. She argues that 'absolute sovereignty' talk continues to be a driver of migration lawmaking, shaping the foreigner-sovereign relation and making thinkable some of the world's harshest asylum policies.

Constructivism and the New Social Studies

Geoffrey Scheurman 2018-07-01 The New Social Studies refers to a flurry of academic and commercial activity during the 1960s and 1970s that resulted in the mass development and dissemination of revolutionary classroom materials and teacher resources. In science as well as social studies, a spirit of "inquiry-based teaching" filled the air during this time, resulting in the development of curricula that were both pedagogically innovative and intellectually rigorous. "Constructivism and the New Social Studies" contains a collection of classic lessons from some of the most successful projects of the era, providing a resource of exceptional ideas and materials that have stood the test of time. These revealing artifacts are presented with commentaries from some of the original directors of major projects, including Edwin Fenton, Barry Beyer, and Suzanne Helburn. In addition to American and World History, groundbreaking lessons are represented in Economics, Government, Sociology, and

Geography, including the Public Issues Series (Fred Newann), The Amherst History Project (Richard Brown and Geoffrey Scheurman) and Teaching American History: The Quest for Relevancy (Allan Kownslar, Gerald Ponder, and Geneva Gay), and Man: A Course of Study (Peter Dow). With a Foreword by Jerome Bruner, the volume not only provides a resource of exceptional curriculum ideas and actual materials, it also builds a lucid bridge between the theoretical ideas of constructivism and the pedagogical principles of inquiry learning. With over 50 years of expertise from curriculum history and social studies pedagogy, the editors make the case that "guided inquiry" as presented in these projects was constructivist by design, offering a range of instructional methods that begin with questions rather than answers and considers progress in terms of the development of analytical skills and experimental habits of mind rather than the mere acquisition of knowledge. Projects developed during the New Social Studies serve as both an interesting historical archive of powerful curricular innovations as well as a treasure trove of actual lessons and materials still useful in social studies classrooms striving to become more constructivist. The lessons and other materials we chose should be relevant if you are an historian, researcher, theorist, or teacher of any subject, but it will be especially significant if you are interested in the nature of social, civic, or historical literacy in America, including how to teach for authentic achievement in those areas.

Practical Inverse Analysis in Engineering

(1997) David M Trujillo 2017-11-22 Continuing advances in computer technology have made it possible for engineers and scientists to construct increasingly realistic models of physical processes. Practical Inverse Analysis in Engineering addresses an important area of engineering that will become even more significant to engineers and scientists - combining measurements with engineering models. This self-contained text presents applied mathematical tools for bridging the gap between real-world measurements and mathematical models. The book demonstrates how to treat "ill-conditioned" inverse analysis problems - those problems where the solution is extremely sensitive to the data - with the powerful theory of dynamic programming. A second theory, generalized-cross-validation, is also discussed as a useful partner in handling real data. The material in the book, much of it published for the first time, presents theories in a general unified setting, so readers can apply the information to their models. A disk containing DYNAVAL programming software lets readers try the methods presented in the text.

Recovery and Stress in Sport Michael Kellmann 2019-03-19 Balancing training, stress, and recovery is essential for achieving optimal performance. The performance of professional athletes can be severely compromised by overtraining, injuries, prolonged periods of competition, or even life events outside their sporting lives. The current recovery-stress state depends on preceding stress and recovery activities, but through simultaneous assessment of stress and recovery, a differentiated picture can be provided. This manual includes two measurement instruments to gauge individual recovery, enabling both athletes and coaches to

better understand the often-unconscious processes that impinge upon peak performance, and to monitor the physical, mental, emotional, mental, and overall recovery-stress state before and after training. The Acute Recovery and Stress Scale (ARSS) and the Short Recovery and Stress Scale (SRSS) are instruments that systematically enlighten the recovery-stress states of athletes. Through utilization of the ARSS and the SRSS, athletes and coaches can better understand the importance of daily activities, including how they can relate to stress/recovery and the direct impact on athletic performance. In addition to the instruments themselves, both of which are simple and easy to use, the manual also discusses their development, their basis in theory, and case studies showcasing their usage. The ARSS and the SRSS provide important information regarding the current recovery-stress state during the process of training, and are essential tools for coaches, sport scientists, sport psychologists, and athletes alike.

Handbook of Response to Intervention and Multi-Tiered Systems of Support Paige C. Pullen 2018-10-04 Of the many issues facing special education (and general education) today, it is difficult to imagine one more important or timely than response to intervention (RTI). Almost overnight RTI has become standard practice across the nation. Unfortunately, RTI remains ill-defined, falls far short of its evidence-based practice goal, is almost invariably misused, and often results in more harm than good. Nevertheless, as a conceptual framework RTI has great potential for ensuring that students with disabilities receive appropriate, evidence-based instruction. The mission of this handbook is to present a comprehensive and integrated discussion of response to intervention (RTI) and its relation to multi-tiered systems of support (MTSS) in both special education and general

education. Although the two terms are currently used interchangeably, distinct differences exist between them. Therefore, chapters are dedicated to distinguishing the two concepts—RTI and MTSS—and describing each one’s unique role in both general and special education. In addition, the authors recommend a third term, Multi-Tiered Instruction, to differentiate the practices related to the purpose of the specific intervention.
