The Crafty Animator Caroline Ruddell 2019-04-03 This collection is a study of the value of craft as it can be understood within the study and practice of animation. The book reconsiders the position of craft, which is often understood as inferior to 'art', with a particular focus on questions of labour in animation production and gendered practices. The notion of craft has been widely investigated in a number of areas including art, design and textiles, but despite the fact that a wide range of animators

use craft-based techniques, the value of craft has not been interrogated in this context until now. Seeking to address such a gap in the literature, this collection considers the concept of craft through a range of varying case studies. Chapters include studies on experimental animation, computer animation, trauma and memory, children's animation and silhouette animation among others. The Crafty Animator also goes some way to exploring the relationship craft has with the digital in the context of animation production. Through these varied discussions, this book problematizes simplistic notions about the value of certain methods and techniques, working to create a dialogue between craft and animation.

Simon Dor examines the game's unanticipated effect by delving into the history of the game and the two core competencies it encouraged: decoding and foreseeing. Although StarCraft was not designed as an e-sport, its role in developing foreseeing skills helped give rise to one of the earliest e-sport communities in South Korea. Apart from the game's clear landmark status, StarCraft offers a unique insight into changes in gaming culture and, more broadly, the marketability and profit of previously niche areas of interest. It shows how design decisions, technological infrastructures, and a strong contribution from its gaming community through Battle.net and its campaign editor were necessary conditions for the flexibility it needed to grow its success. In exploring the fanatic clusters of competitive players who formed the first tournaments and professionalized gaming, StarCraft shows that the game was key to the transition towards foreseeing play and essential to competitive gaming and e-sports.

Games C. Thi Nguyen
2020-03-24 Games are a unique art form. Games work in the medium of agency. Game designers tell us who to be and what to care about during the game. Game designers sculpt alternate agencies, and game players submerge themselves in those alternate agencies. Thus, the fact that we play games demonstrates the fluidity of our own agency. We can throw ourselves, for a little while, into a different and temporary motivations. This volume presents a new theory of games which insists on their unique value. C. Thi Nguyen argues that games are an integral part our systems of communication and our art. Games sculpt our practical activities, allowing us to experience the beauty of our own actions and reasoning. Bridging aesthetics and practical reasoning, he gives

an account of the special motivational structure involved in playing games. When we play games, we can pursue a goal, not for its own value, but for the value of the struggle. Thus, playing games involves a motivational inversion from normal life. We adopt an interest in winning temporarily, so we can experience the beauty of the struggle. Games offer us a temporary experience of life under utterly clear values, in a world engineered to fit to our abilities and goals. Games also let us to experience forms of agency we might never have developed on our own. Games, it turns out, are a special technique for communication. They are a technology that lets us record and transmit forms of agency. Our games form a "library of agency" and we can explore that library to develop our autonomy. Games use temporary restrictions to force us into new postures of agency.
